

ESG Strategy

Clean Air Metal's mission and vision is to explore and develop a suite of metals that are vital to reducing global air pollution and climate change.

The United Nations Conference on Environment and Development (UNCED; 1992) defines sustainability as "meeting the needs of the present without compromising the ability of future generations to meet theirs. It has three main pillars: economic, environmental and social. These three pillars are informally referred to as people, planet and profit".

For Clean Air Metals in turn, sustainability means ensuring that our business is fully and transparently accountable for managing social, environmental and economic risks and opportunities. At Clean Air Metals, sustainability means adopting leading industry standards for the management of health, safety, and the environment. We engage with the local communities and stakeholders, with integrity and respect, to establish positive and constructive participatory relationships. We create a workplace where employees are valued, engaged and encouraged to succeed.

Acting sustainably aligns the Company with its stakeholders' values, exploring and developing natural resources for the benefit of present and future generations.
